**Contract**                **Annual Inspection & Maintenance**

---

### Project Scope

This is an annual project which sees the NZIA team spending anywhere between 4 -8 weeks in Australia completing a wide range of tasks for Fonterra during their annual shutdown. Most of these tasks are carried out to very tight time frames and I have listed below the routine tasks we complete:

- Inspection & Welding repairs of Milk Powder Driers
- Inspection & Welding repairs of Silos
- External & Internal cleaning of the entire factory
- Various maintenance tasks, and repair work throughout the factory
- Confined space tasks – ranging from inspection, cleaning to repairs and maintenance.

NZIA also got called out urgently to Australia to this same client in mid 2008 after they had a fire inside the factory, the team worked very intensely for a period of approximately 3 weeks to assist in getting the factory back on line and running again.
